- 1. A non-naturally occurring method for preventing or reducing hypoxia-acidosis induced injury to a cell, the method comprising the step of: reducing BNIP3 expression or activity in the cell.
- 5 2. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises decreasing the amount of BNIP3 mRNA in the cell.
  - 3. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises decreasing the amount of BNIP3 protein in the cell.
  - 4. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises introducing an antisense oligonucleotide into the cell.
- 5. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises expressing a mutant BNIP3 protein in the cell.
  - 6. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises preventing BNIP3 protein dimerization in the cell.
- 7. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises preventing translocation of BNIP3 protein to a mitochondrion in the cell.
  - 8. The method of claim 1, wherein the step of reducing BNIP3 expression or activity in the cell comprises preventing or reversing acidosis in the cell.
  - 9. The method of claim 1, wherein the cell is a myocyte.
  - 10. The method of claim 9, wherein the cell is a cardiomyocyte.
